The Diagnostic Unit is used for reading, displaying and deleting fault codes saved in the electronic control unit of the heater. The electronic control unit can save up to 5 fault codes, labeled F1 to F5. The most recent fault code is in memory location F1.

The current or actual fault code is shown as "AF" and is always written into the F1 memory location. Previous fault codes are transferred to memory locations F2 to F5.

1. Button : delete fault memory
2. Button : delete fault memory
3. Button : switch heater on/off, request diagnostic fault codes
4. Button : backwards, fault F5 – F1, AF
5. Button : forward AF, F1 – F5
6. Display

**Connection**

1. When available, connect the unit to the diagnostic pigtail (8-pin black connector) on the heater’s main wiring harness, located at the heater main connection.
2. If the diagnostic pigtail is not present, connect the unit as outlined in the appropriate heater technical manual. A tester wiring adaptor may be required.

<table>
<thead>

<td>20 2900 70 50 36</td>
</tr>
</tbody>
</table>

3. Once correctly connected, the Diagnostic Unit display shows:

![Display Icon]

**Fault Code Retrieval**

4. Press the button on the diagnostic unit to switch on the heater. The display shows:

![Display Icon]

5. After 8 seconds, the display shows one of the following:

![Display Icon] No error
Current fault (i.e. fault code 64)

Fault diagnosis not possible
Possible causes:
- Adapter cable not connected properly.
- Control unit defect or incapable of diagnosis
  (i.e. control unit not equipped with self-diagnostics)

Display of the Fault Memory F1 – F5 or F5 – F1

6. Press the buttons \( \text{ or } \) once or several times to show the individual fault code memories in decreasing or increasing order. The display shows:

   \( \text{F2: 10} \)  
i.e. fault memory 2 / fault code 10

   Only those fault memory position with an error assigned to them are displayed.

Delete Fault Memory

7. Eliminate the cause of the fault. Be sure to correct the root cause, not just the symptom.

8. Press both buttons \( \text{ at the same time until the display shows:} \)

End Diagnosis

10. Press button \( \text{on the diagnosis unit to switch the heater off. The display shows:} \)

11. Wait for the end of the heater cool down period.

12. Remove the adapter cable from the cable harness and restore the connection.
