

New Hydronic B5WS kit for Gasoline Cars

Ladies and Gentlemen,

In order to continuously improve our services and bring extra comfort to our customers, Espar is proud to announce the release of a new Hydronic B5WS kit for gasoline cars, part # 20 1862 05 00 00, "HYD B5WS HEATER ASSEMBLY 12V".

The kit includes a Hydronic B5WS heater (the smallest Hydronic 5 available), standard mounting

bracket, fuel and coolant pumps with holders, automotive fuel pick up pipe, fuel lines, harness, vehicle blower relay, exhaust muffler and pipes. For extra convenience, it also has preformed coolant hose with four bends, mounting bars for fuse holder and heater bracket for use when regular way of mounting is not possible and mounting bracket needs to be extended. Most of the electrical connections are pre-crimped, which saves installation time. The kit includes straight and angle coolant fittings for heater which allows fitting the heater into very small spots in the car.

For added flexibility the kit does not include a control option, so it can be used with ESPAR or third party timers and switches. ESPAR recommends using the Mini Timer (Part# 22 1000 31 60 00 - green display or 22 1000 32 18 00 - blue display) or Easy Start T (advanced mini-version of 7 day timer with diagnostic, part # 22 1000 32 88 00)

Availability date of the new kit is April 23, 2009, orders can be placed now.

More information for the kit and control options can be found at www.espar.com/help (folders for Hydronic 4-5 heaters and for Control Options).
